

AP 366 – INDOOR RECESS/NOON RECESS PERIOD

BACKGROUND

During the periods of time that our community experiences severe weather, it may be necessary for the Principal (or delegate) to declare the necessity for an indoor recess/noon recess period.

PROCEDURES

1. The Principal (or delegate) shall use -27°C (including wind chill) as a guideline temperature for which to announce an indoor recess/noon recess period during the winter months.
2. Administrators receive Environment Canada warnings related to severe weather. Should the Principal (or designate) receive weather watches or weather warnings that warrant an indoor recess/noon hour period (i.e. high winds, tornado warnings), he/she will announce an indoor recess/noon hour period until the severe weather has subsided.
3. Our division works closely with the City of Saskatoon's Emergency Measures Organization and will respond directly to any safety measures recommended by this agency.
